Date of calibration

Average deviation

The above-named company uses spectrophotometric measuring techniques on its printing equipment to examine the quality of color reproduction and to regulate colors in accordance with the ISO 13655 standard. In order to achieve the closest tolerances, colorimetric calibrations are regularly performed on the equipment with the manufacturer.

The last calibration of the referenced color measuring device was performed at the above-mentioned date. The average deviation, compared to the manufacturers reference values, is within the tolerances for reliable color measurement. The equipment can therefore be used for color measurement in accordance with the ISO 12647-2 standard.

Uwe Galm
